#### Product description

The BMW Performance brake corresponds to the 135i series brake with the following difference:

- The 6-piston aluminium fixed yoke on the front axle painted in BMW "Performance Yellow", including the "BMW Performance" logo in ferric grey.
- The internally-ventilated brake disc on the front axle is perforated and grooved.
- The 2-piston aluminium fixed yoke on the rear axle painted in BMW "Performance Yellow", including the "BMW Performance" logo in ferric grey.

#### Sales features / benefits

- The holes and grooves in the BMW Performance front axle brake discs reduce the formation of a film of water between the brake pad and the brake disc.
- More attractive look.
- Underlines the sporty character, particularly when combined with alloy wheels with an open wheel design.
- The Performance front and rear brake callipers can be installed in the 135i without any additional measures.
- Brake discs are a wear part. The perforated and grooved front axle brake discs can be offered to 135i customers as an alternative when changing the discs.
- Not available ex-works.

#### Homologation

No entry is required in the vehicle registration document since the brake system's data relevant for registration does not change.

#### Note

- The car must be run-in carefully during the first 200 km after installation of the brake system! The full effectiveness of the brake system is provided thereafter.
- As a result of the special construction of the perforated and grooved brake discs, they may generate noise when the brakes are used, but this has no effect on the stability of the brake discs. ◀

BMW Performance 17" sport brakes with sports brake discs

#### Availability

from 03/2008

#### Installation time

approx. 2.75 hours

#### EPC DVD

from 01/2008
