#### Product description

- The 17-inch BMW Performance brake disc can be installed in the 135i (E82/E88) without requiring additional work on the front axle.
- In the 1 Series (E81/E82/E87/E88) and 3 Series (E90/E91/E92/E93) with 17-inch BMW Performance brake system, available for all models except 3 Series xDrive, 330i (ACEA), 335i, 330d, 335d, the 17-inch BMW Performance brake disc is already included in the relevant retrofit kits.
- Perforated and grooved, internally ventilated brake discs on the front axle.
- Not available ex-works.

#### Sales features / benefits

- The holes and grooves in the BMW Performance brake disc reduce formation of a film of water between the brake pad and the brake disc.
- More attractive look.
- Underlines the sporty character, particular when combined with alloy wheels with an open wheel design.
- Brake discs are subject to wear; the perforated and grooved, ventilated brake discs can be offered to the customer as an alternative for the 135i (E82/E88) when the brake discs are being replaced.

#### Homologation

The 135i (E82/E88) or already retrofitted 17-inch BMW Performance brake system does not require an entry in the vehicle registration document since the brake system's data that are relevant for registration do not change.

#### Note

- We recommend fitting new brake pads when installing BMW Performance sport brake discs.
- The car must be carefully run in during the first 200 km after installation of the brake system, then the full effectiveness of the brake system is available.
- As a result of the special construction of the perforated and grooved brake discs, they may generate noise when the brakes are used, but this has no effect on the stability of the brake discs. ◀

BMW Performance brake disc

#### Safety note

The BMW Performance brake disc is, like the 17-inch standard brake disc, only permitted with alloy wheels of at least 17-inch size (also in winter).

**Please ensure that you pass this information on to the customer.**

General case: Please refer to the current status in the EPC regarding which wheels can be fitted. ◀
