Product description

- Developed by BMW M GmbH as a special accessory
- Technically modified for 330i, 330d, 330xi, 330xd with standard 17" brake system
- Perforated compound brake discs as on the BMW M3 on the front axle
- Perforated standard brake discs on the rear axle
- The brake callipers and brake pads are the same as the standard ones
- Not available ex-works

Sales features/Benefits

- Improved look
- Underlines the sporty character, particularly when combined with alloy wheels with an open wheel design
- Lower weight, resulting in lower unsprung masses
- Brake discs are wear parts, perforated brake discs can be offered to the customer as an alternative when discs need replacing

Delivery

- 1 brake disc for the front left (D = 325 x 25)
- 1 brake discs for the front right (D = 325 x 25)
- 2 rear brake discs (D = 320 x 22)

See EPC for list of parts in kit

Technical information

The difference to conventional brake discs is the fact that the compound brake discs on the front axle have a radial plain bearing for the brake disc rings. This "floating" system allows the brake disc ring to expand freely when hot.
