

## ORIGINAL BMW ACCESSORIES. Retrofit Kit, sport brake, red.

### NEWS:

- New product

### Marketing name

M sport brake red.

### Product description

The red M sport brake is the first sport brake available for retrofitting on the M2. The sport brake is an upgrade to the brake size on the front and rear axles compared to the standard brake and significantly improves the deceleration effect in extreme conditions.

### Sales features/benefits

- The **attractive** appearance of the red M Performance brake **perfectly** matches the design of the car and **accentuates** its sporty character.
- A separate code variant of the DSC (Dynamic Stability Control) allows the function of safety-related stability systems and of all the driver assistance systems dependent on them.
- The design and stability of the brake **perfectly highlight** the sporty nature of the car.
- The **solid** presence of the **perforated** sport brake discs is **specially** accentuated by the **open** wheel design.

### Comparison with competition

- The M sport brake is the best value for money on a competition comparison basis.
- The M sport brake has been tested in accordance with all BMW quality and function standards. The retrofit preserves the vehicle's warranty.

### Functionality

- The internally ventilated, perforated BMW M Compound brake disks are larger than the standard disks and deliver improved thermal capacity and therefore greater braking performance in extreme conditions. During frequent changes of fast acceleration and braking, the braking performance (good responsiveness and thermal resilience) is maintained for longer.

### Content/validity

Please note that the purpose of the product information is solely to provide advance information about new products.

**Before ordering, always verify the stated parts numbers in the ETK. Only the ETK provides the currently valid information.**

Retrofit Kit, sport brake, red.

- The 6-piston fixed callipers on the front axle and 4-piston fixed callipers on the rear axle are made of aluminium with a lightweight design. The lightweight, perforated compound brake disks are made in multiple pieces from an aluminium base with a floating grey cast friction ring.
- Maximum integration: The M sport brake fits perfectly into the package space and is perfectly coordinated with the control system. This safeguards the function of safety-related DSC and all dependent driver assistance systems.
- The DSC coding must be adapted to the BMW M sport brake system.

### Cross-selling

- 19" M Performance forged wheel Y spoke Styling 763M with Cup tyres
- M Performance chassis
- M Performance exhaust system

### Package

- Brake callipers for front and rear axle in M Performance red
- Brake pads for front and rear axle
- Brake disks for front and rear axle
- Brake guard plates for front and rear axle
- Brake pad wear sensors for front and rear axle
- Parts required for installation

See EPC for details of the kit contents.
